repeater feature – Kantronics

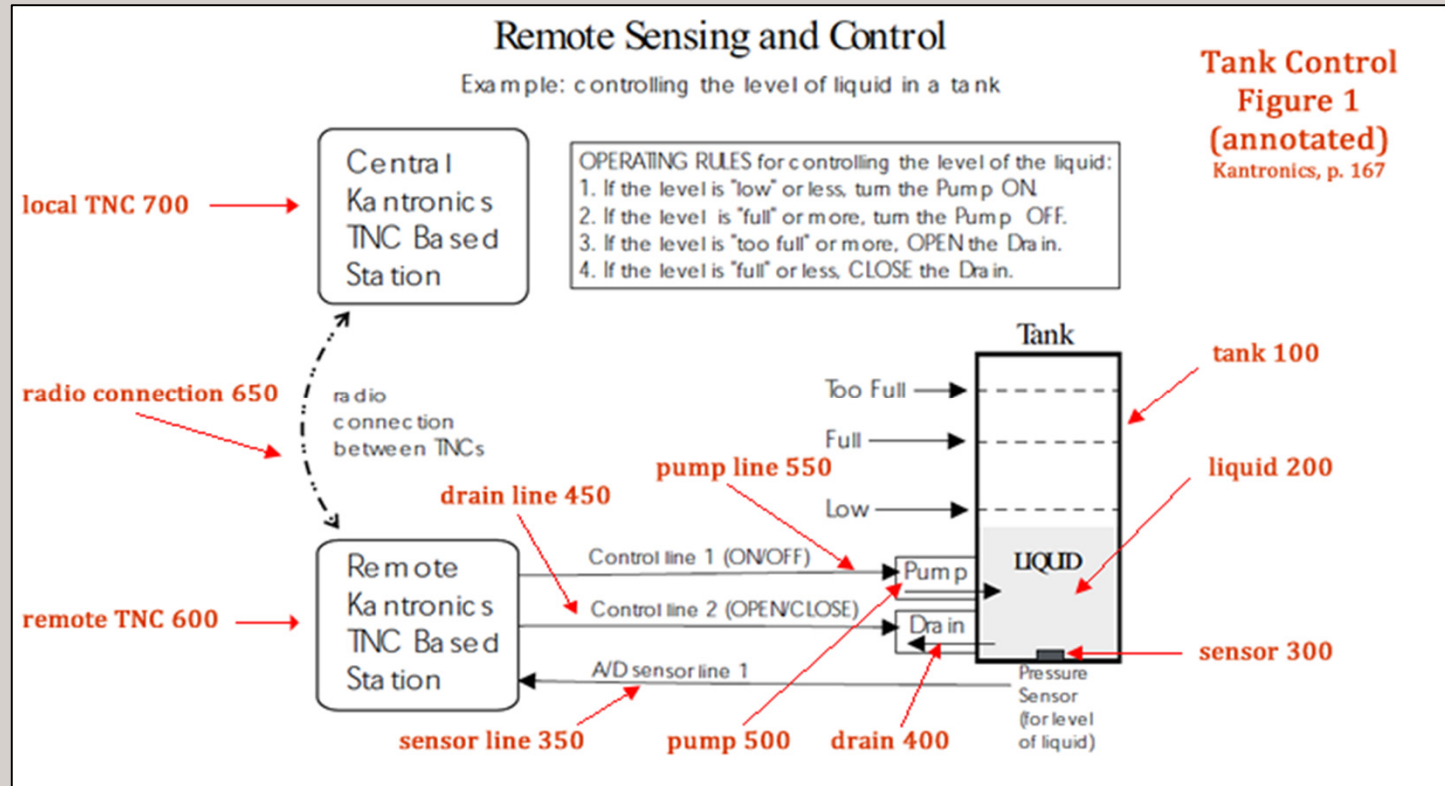

Digipeating

Everything we have done so far will only be heard by those within range to hear your signal. With packet radio it is possible to go farther than that. The DIGIPEAT parameter in the TNC comes defaulted ON. This makes your TNC a possible relay station, or digital repeater — digipeater, or just digi for short. In many VHF communities one or more of these is put up in a good, high location and referred to as a dedicated digi. The TNC and radio is all that is needed for the digital repeater to do its job. A computer would be needed if you wanted to

Kantronics at 105

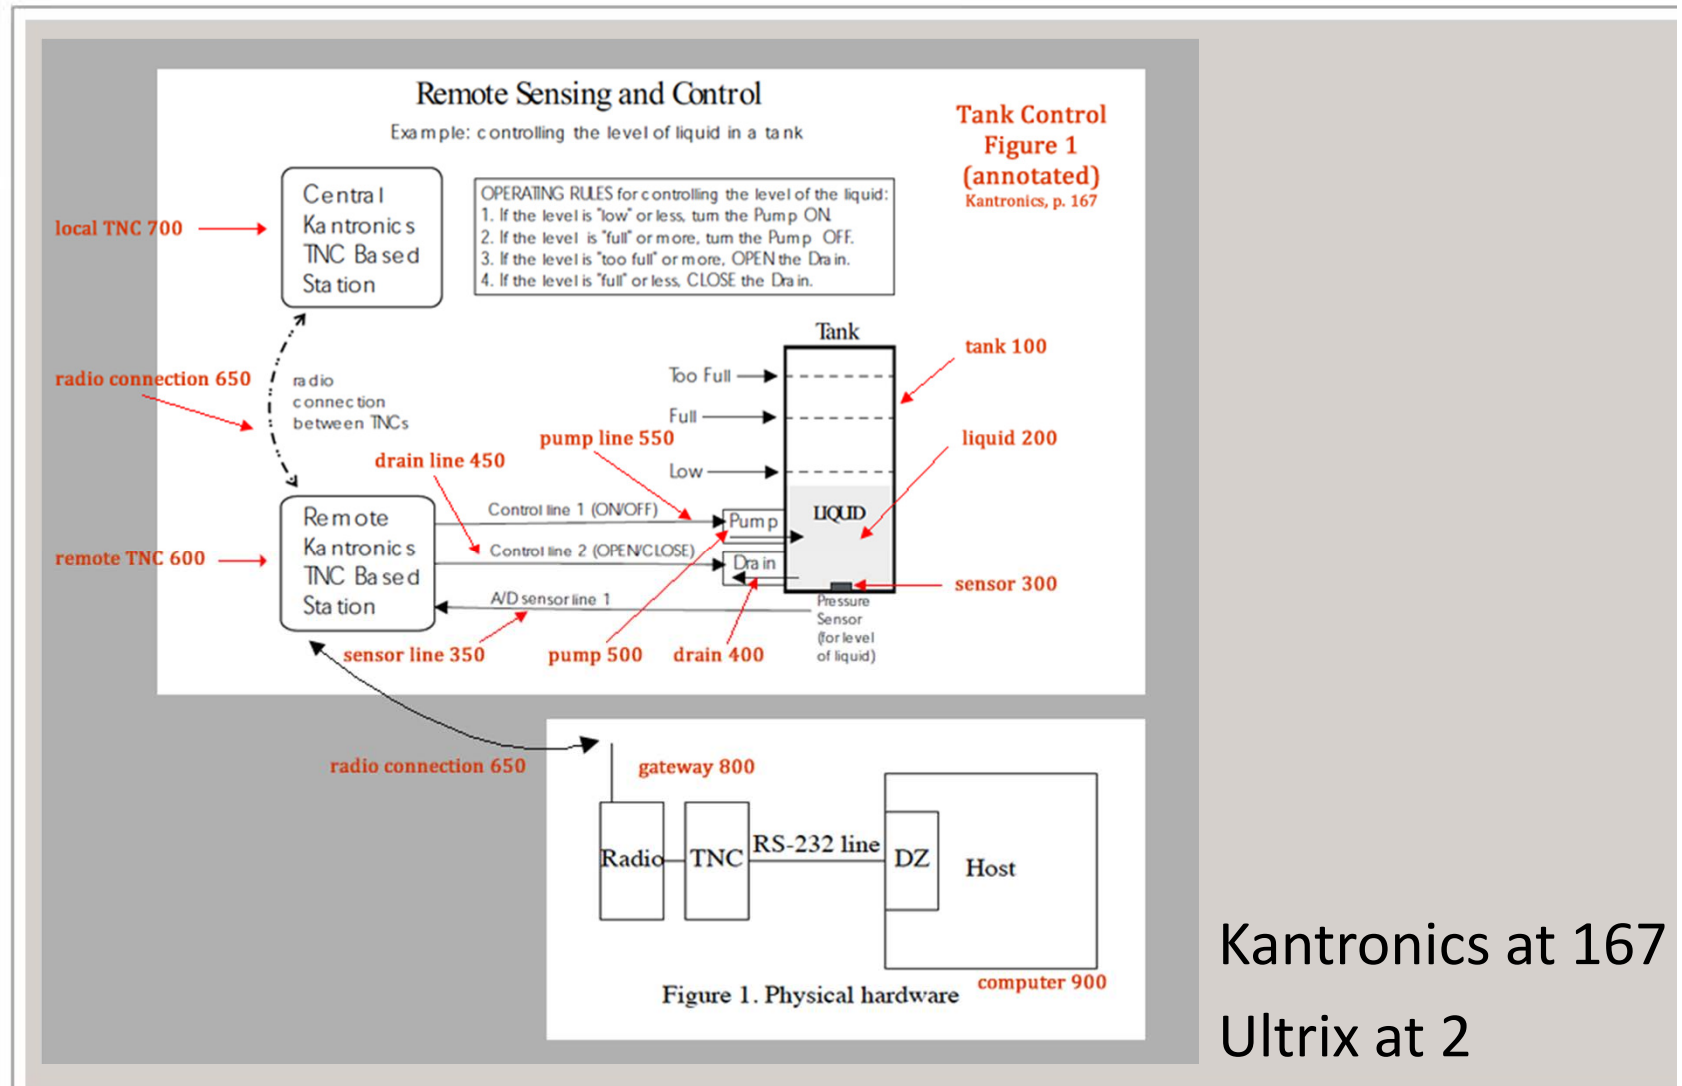

Claim 1: “A wireless communication network adapted for use in an automated monitoring system for monitoring and controlling a plurality of remote devices...” (1 of 2)

Kantronics at 167

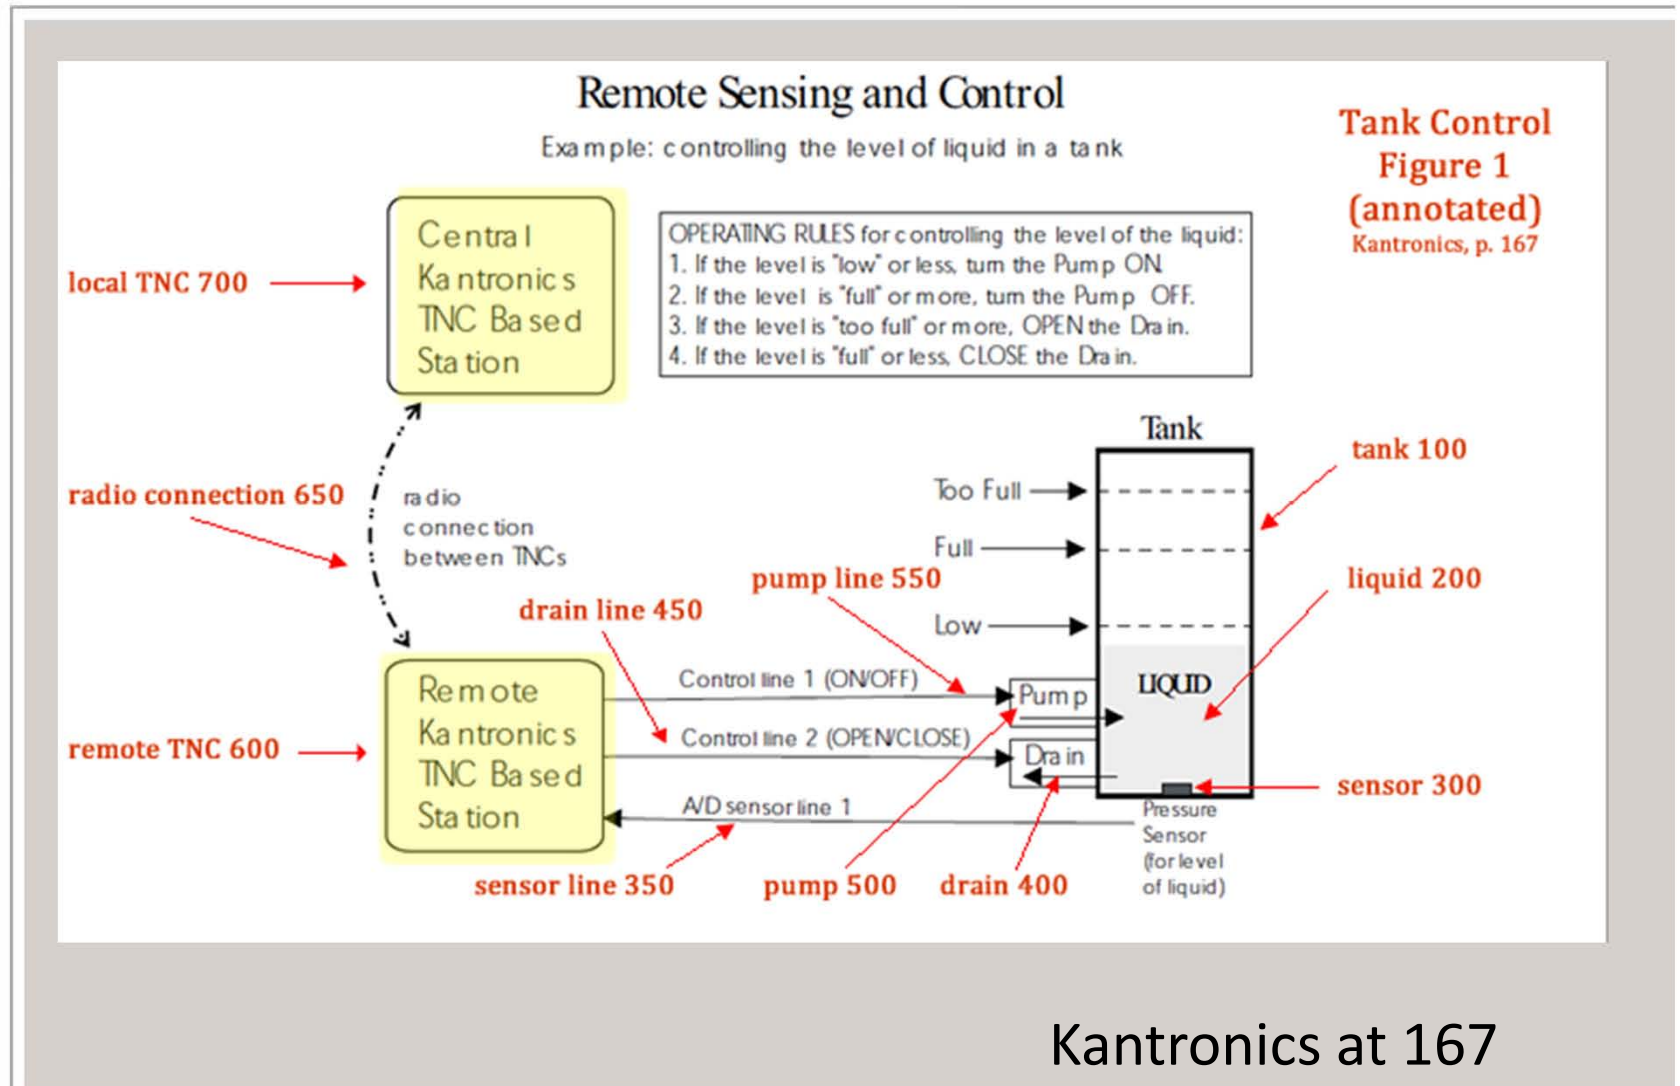

“...via a host computer connected to a wide area network, the wireless communication network comprising:” (2 of 2)

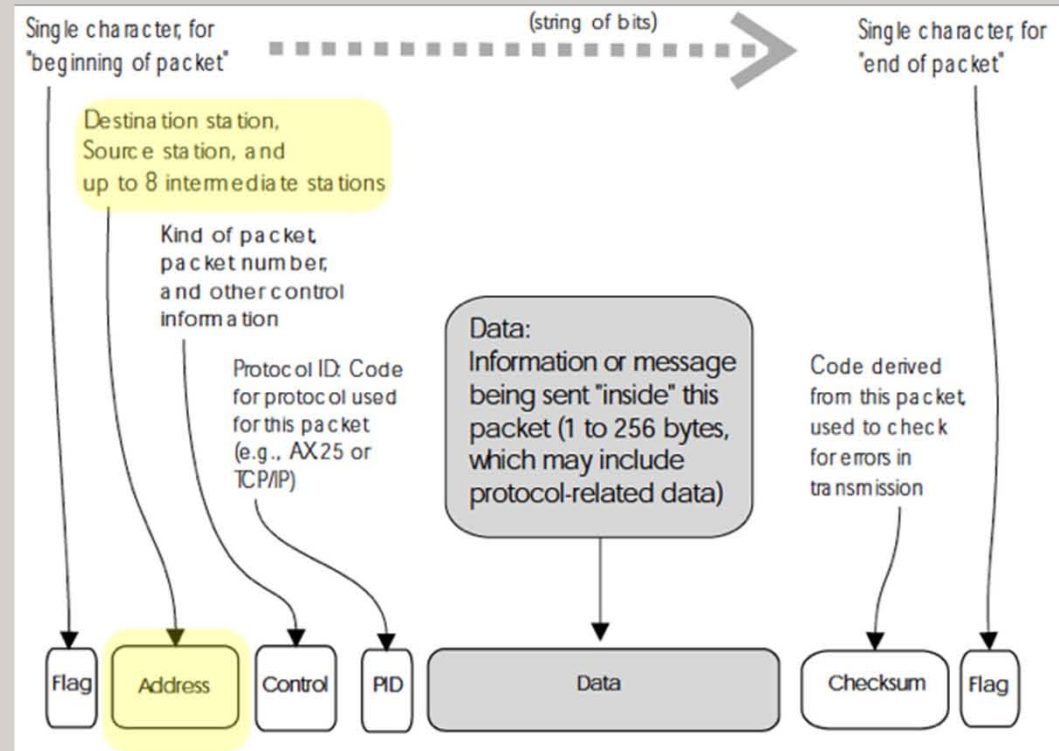

“a plurality of wireless transceivers...” (1 of 9)

“...having unique identifiers,...” (2 of 9)

“each of the plurality of wireless transceivers configured to receive a sensor data signal...” (3 of 9)

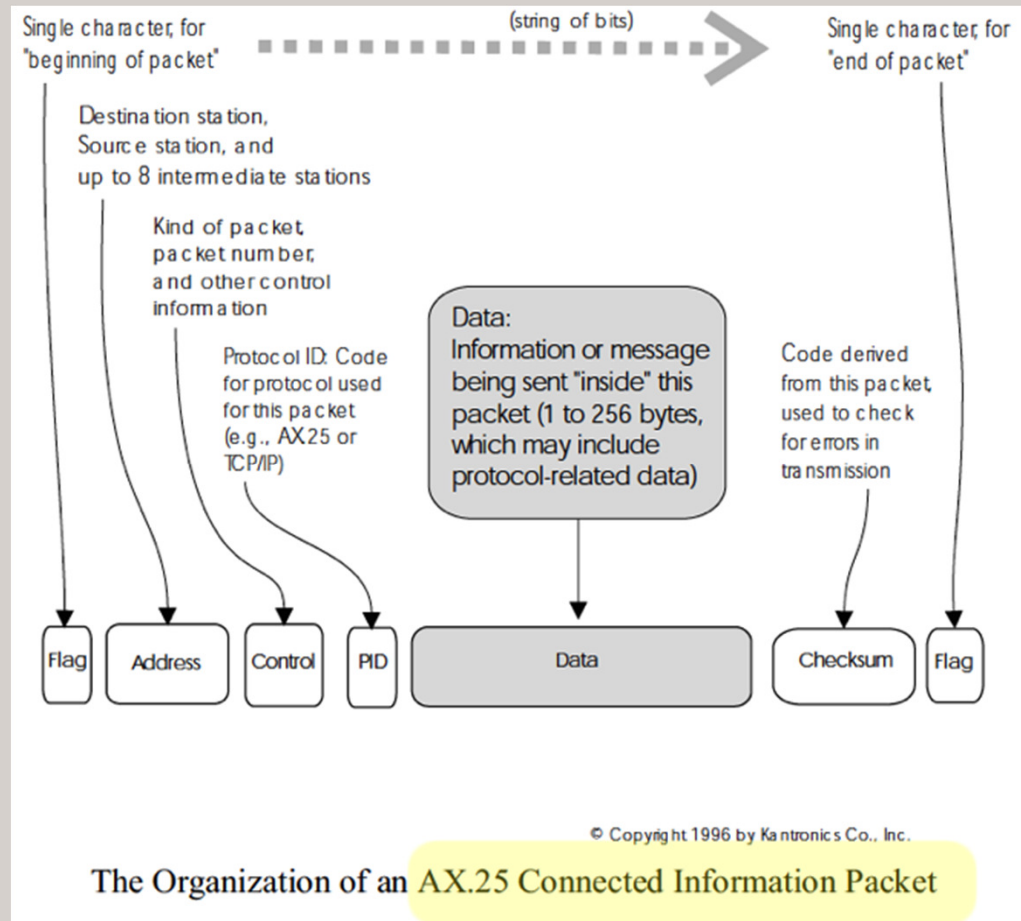

“...from one of the plurality of remote devices...” (4 of 9)

Kantronics at 167

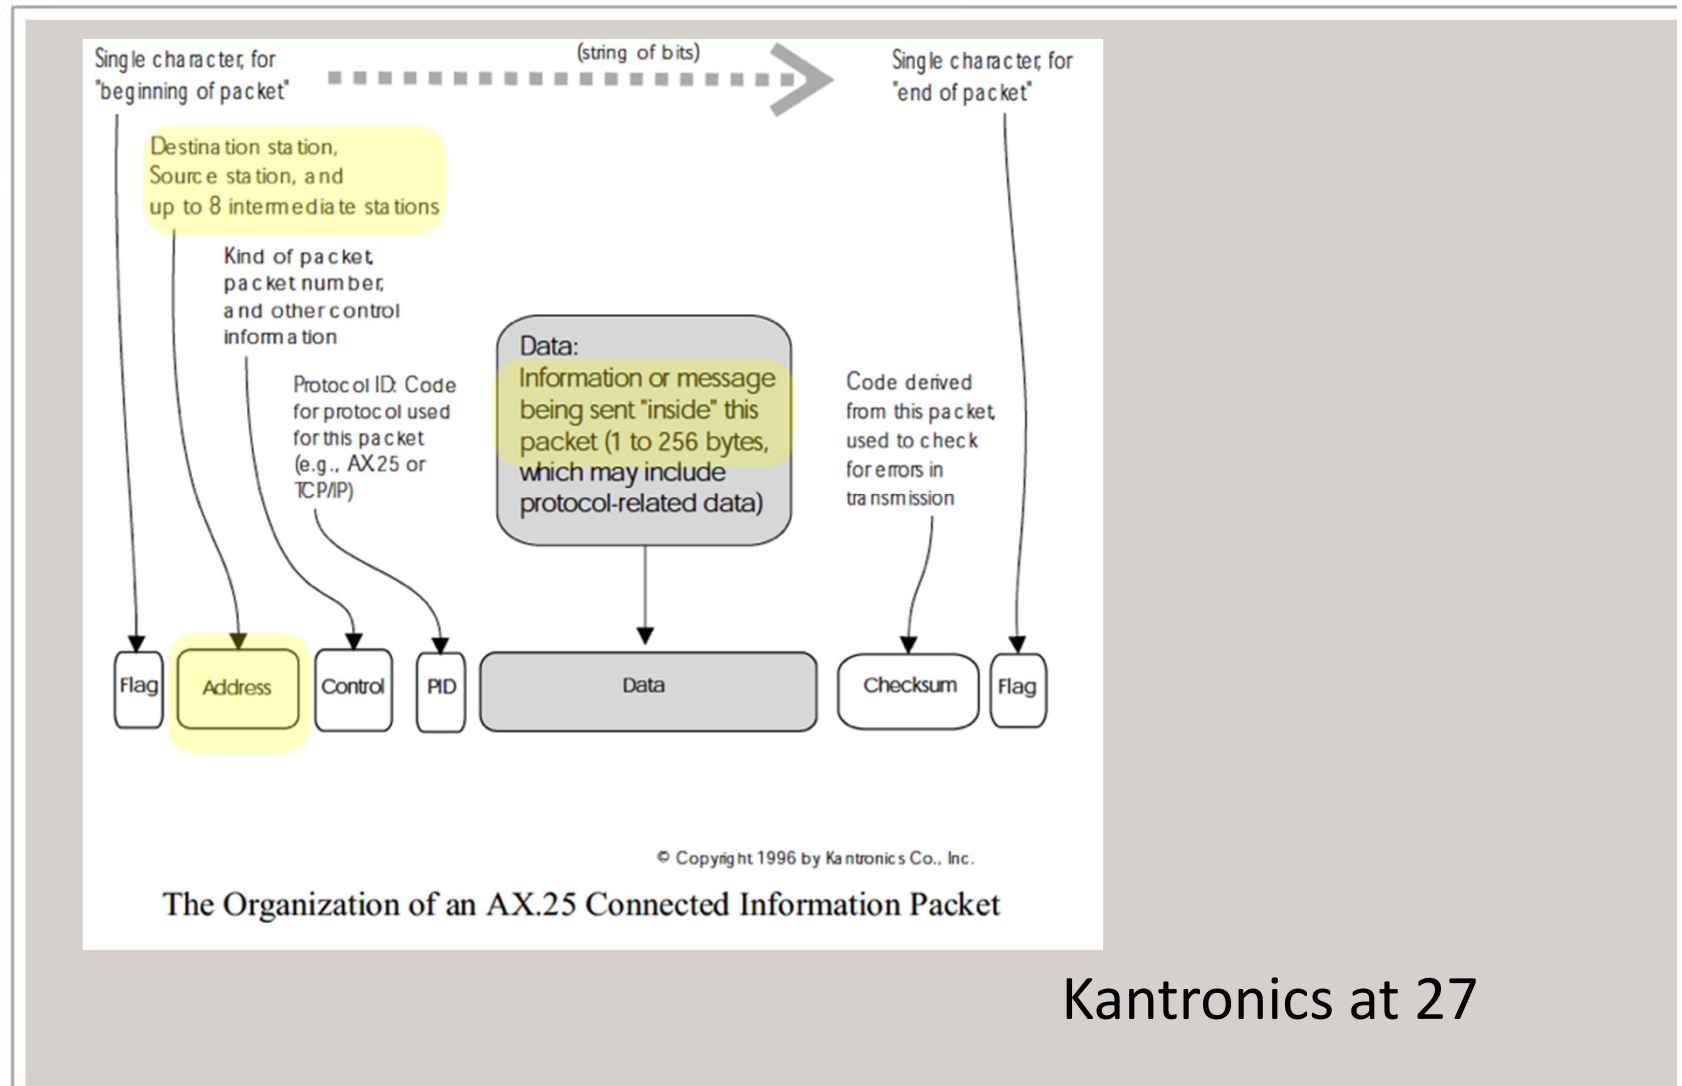

“...and transmit an original data message using a predefined wireless communication protocol,...” (5 of 9)

Kantronics at 27

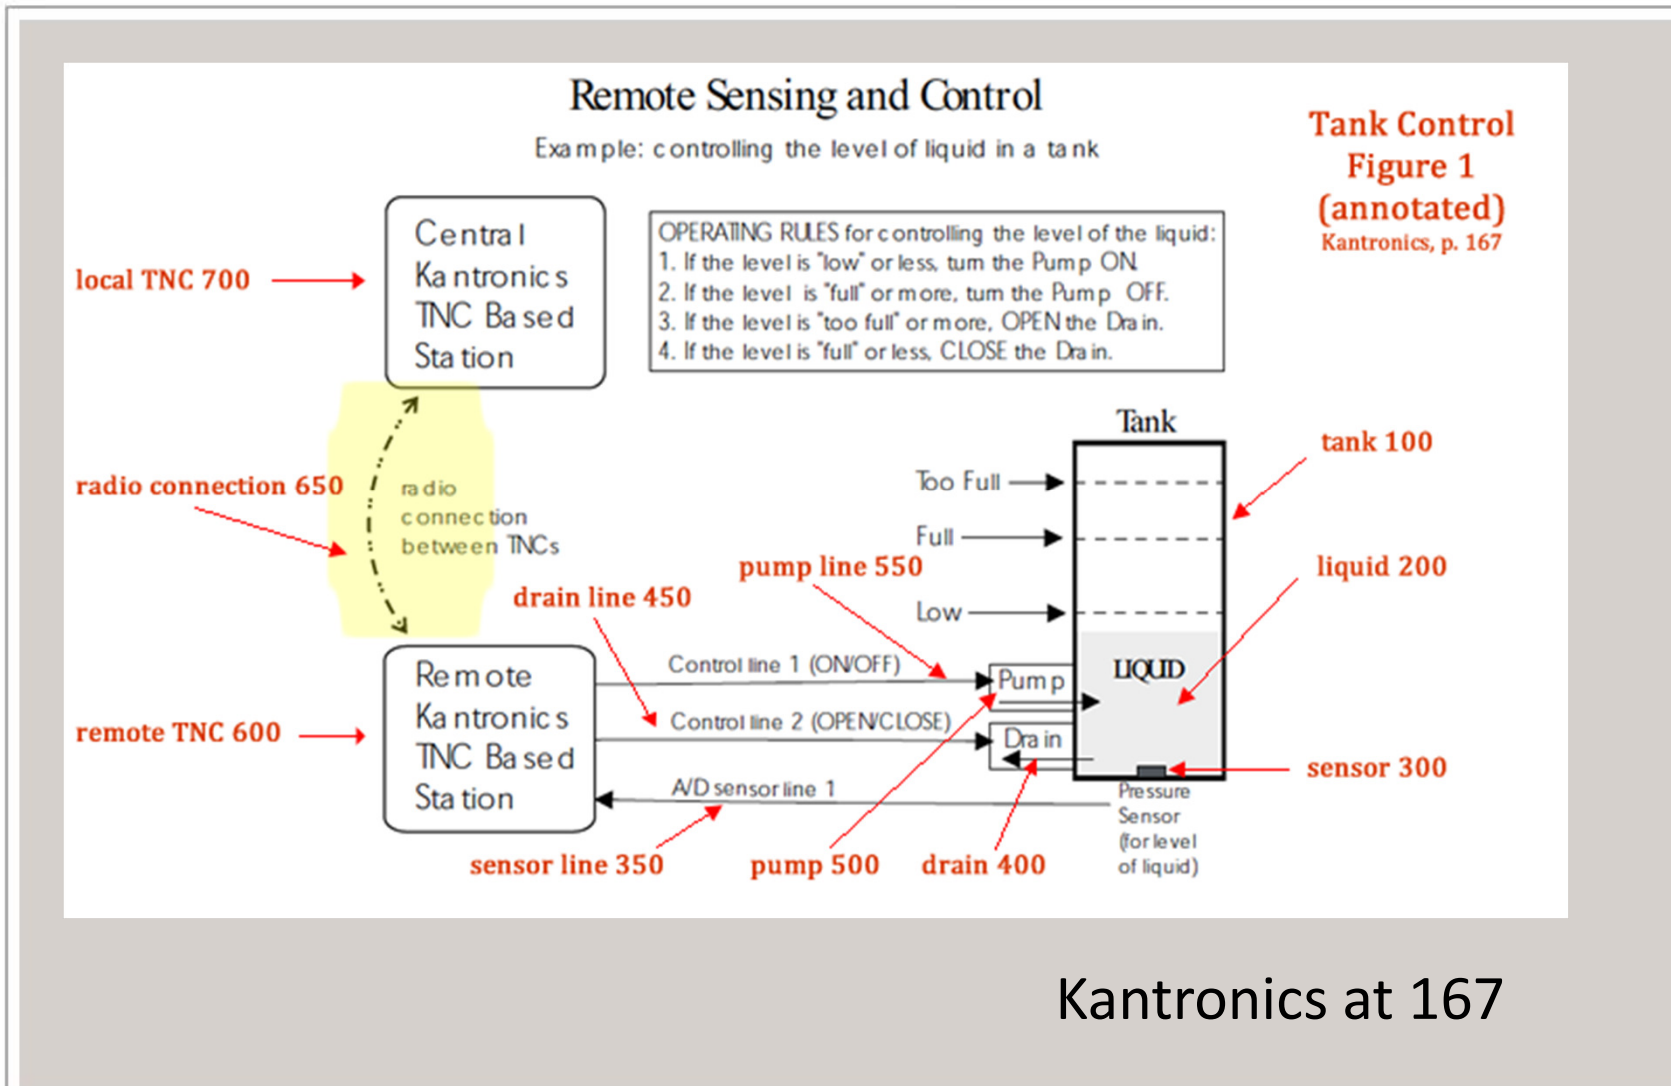

“...the original data message comprising the corresponding unique identifier and sensor data signal,...” (6 of 9)

“...and further configured to receive the original data message transmitted by one of the other wireless transceivers...” (7 of 9)

“...and transmit a repeated data message using the predefined communication protocol,...” (8 of 9)

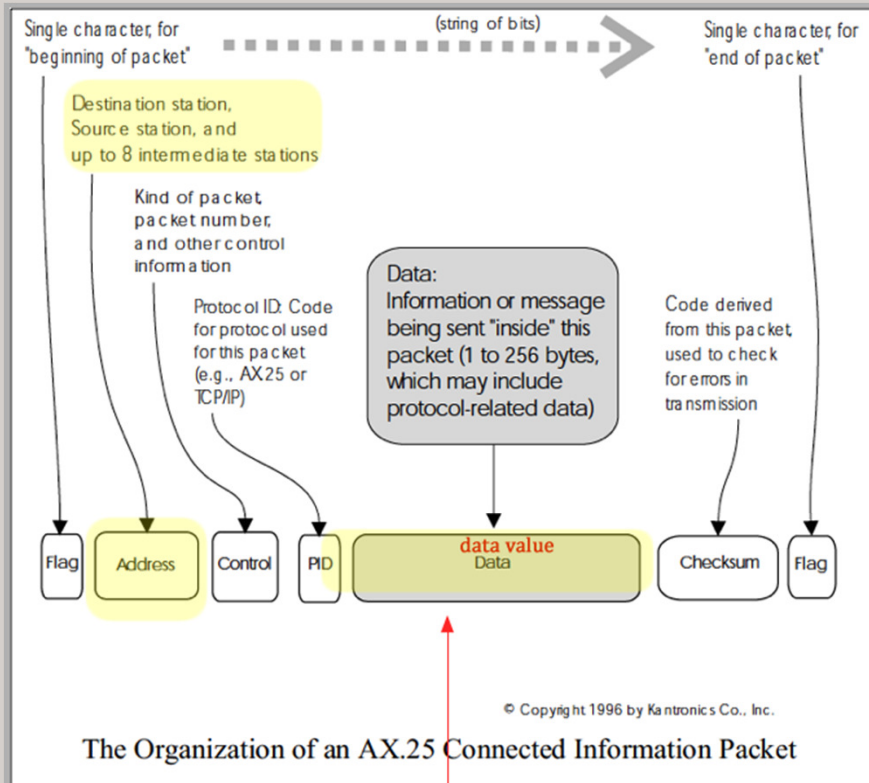

Digipeating

Everything we have done so far will only be heard by those within range to hear your signal. With packet radio it is possible to go farther than that. The DIGIPEAT parameter in the TNC comes defaulted ON. This makes your **TNC a possible relay station, or digital repeater** — digipeater, or just digi for short. In many VHF communities one or more of these is put up in a good, high location and referred to as a dedicated digi. The TNC and radio is all that is needed for the digital repeater to do its job. A computer would be needed if you wanted to

Kantronics at 105

“...the repeated data message including the sensor data signal and the corresponding unique identifier;” (9 of 9)

Kantronics at 27, 184

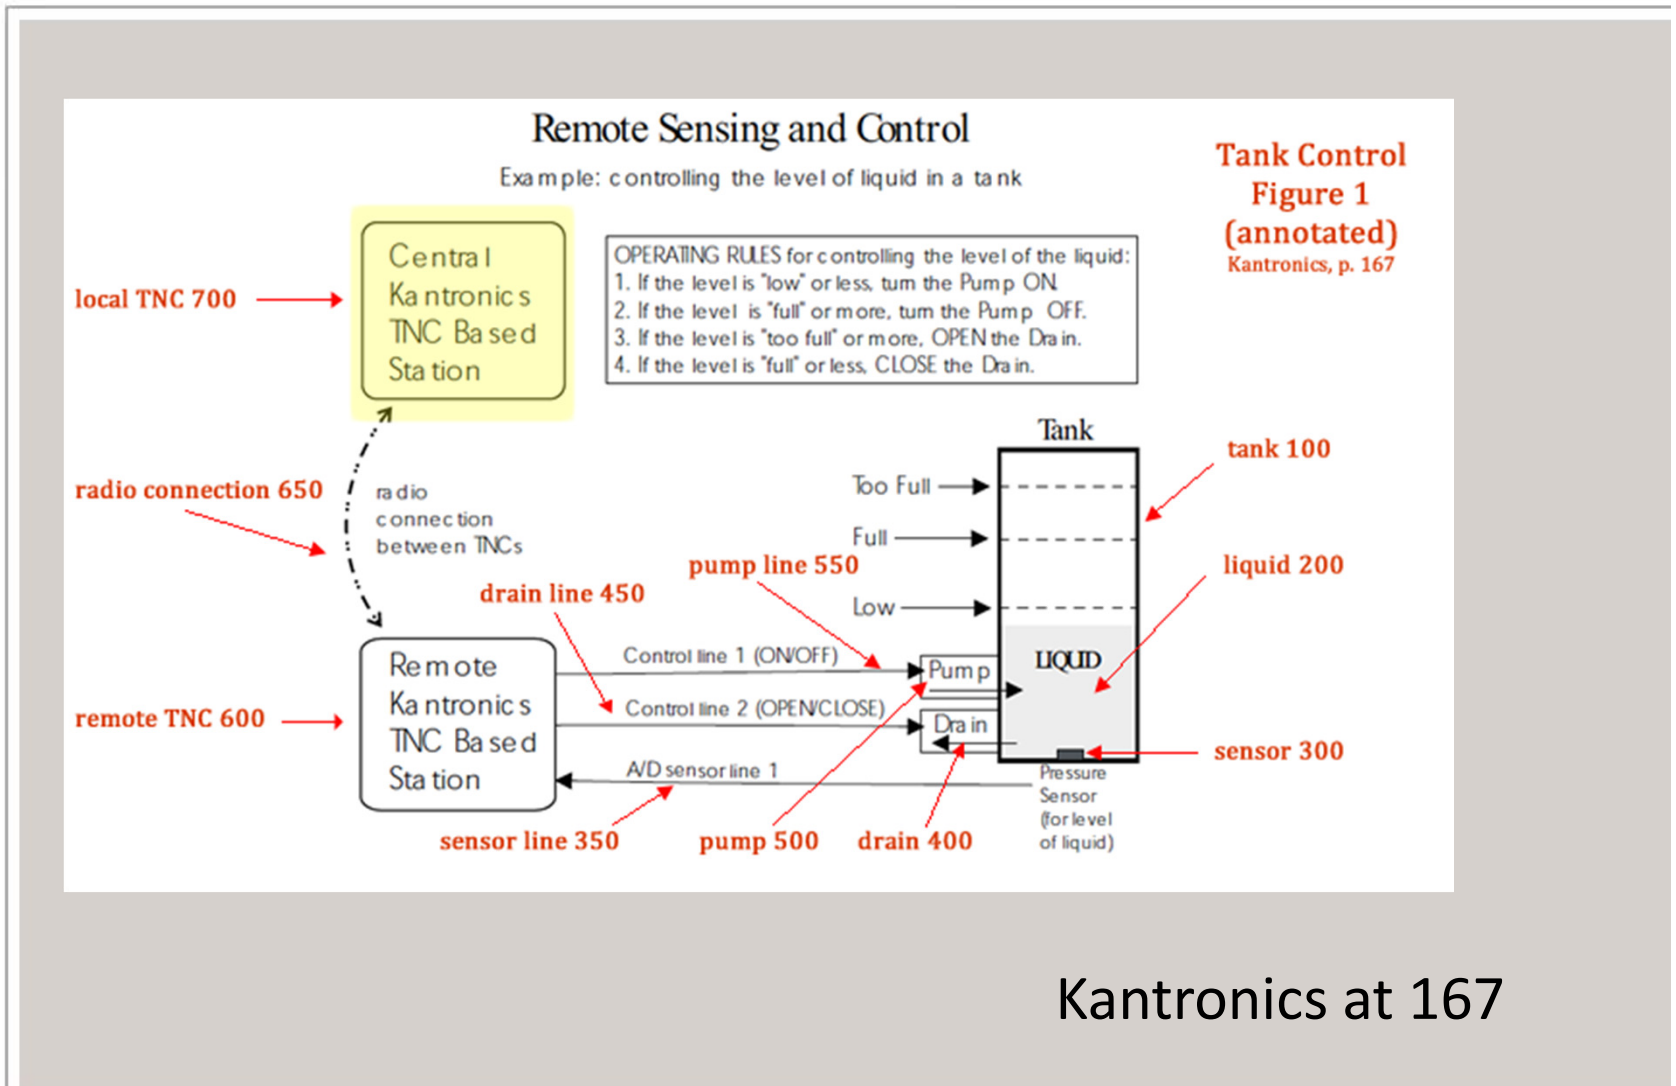

The response is in the following form:

AN0/AN1/AN2/AN3/AN4/AN5/AN6/AN7

- AN0, input (0), reports a decimal number in the range of (0-255), representing the current DC voltage of an external input read from either pin 4 on the Radio Port or from pin 18 on the Serial Port, depending on the current setting of jumper J8:

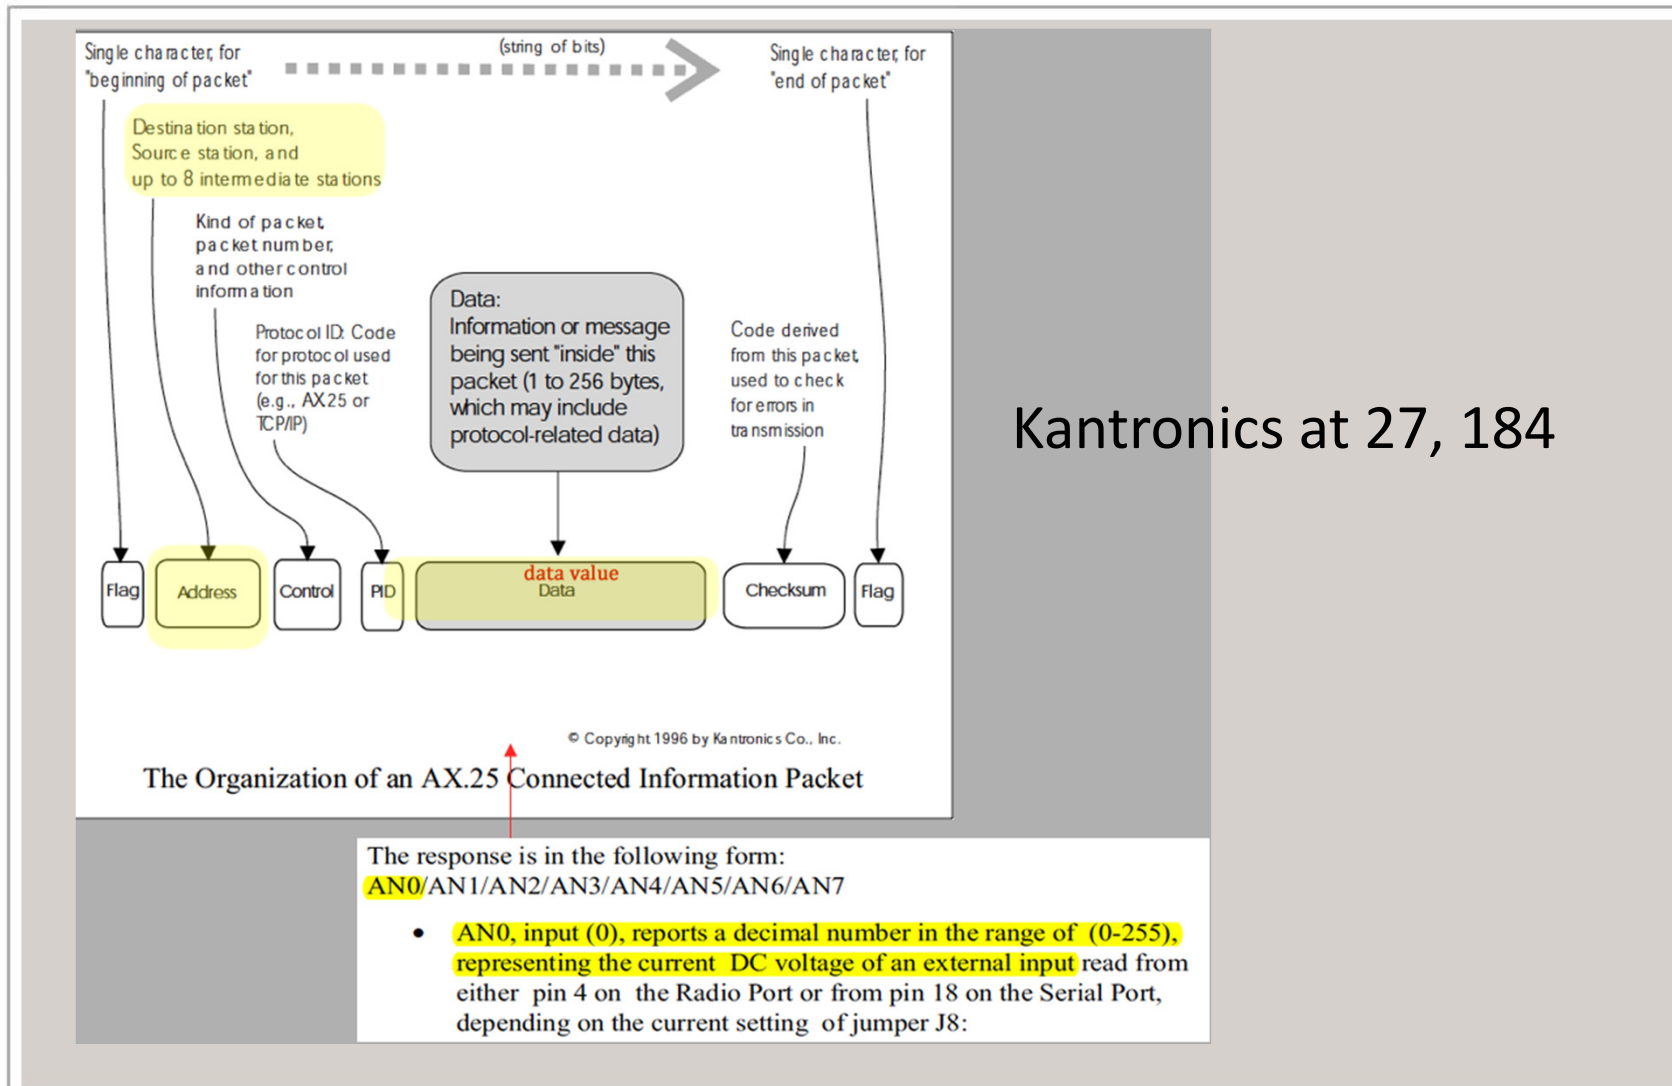

“and a site controller in communication with at least one of the plurality of wireless transceivers,” (1 of 5)

Kantronics at 167

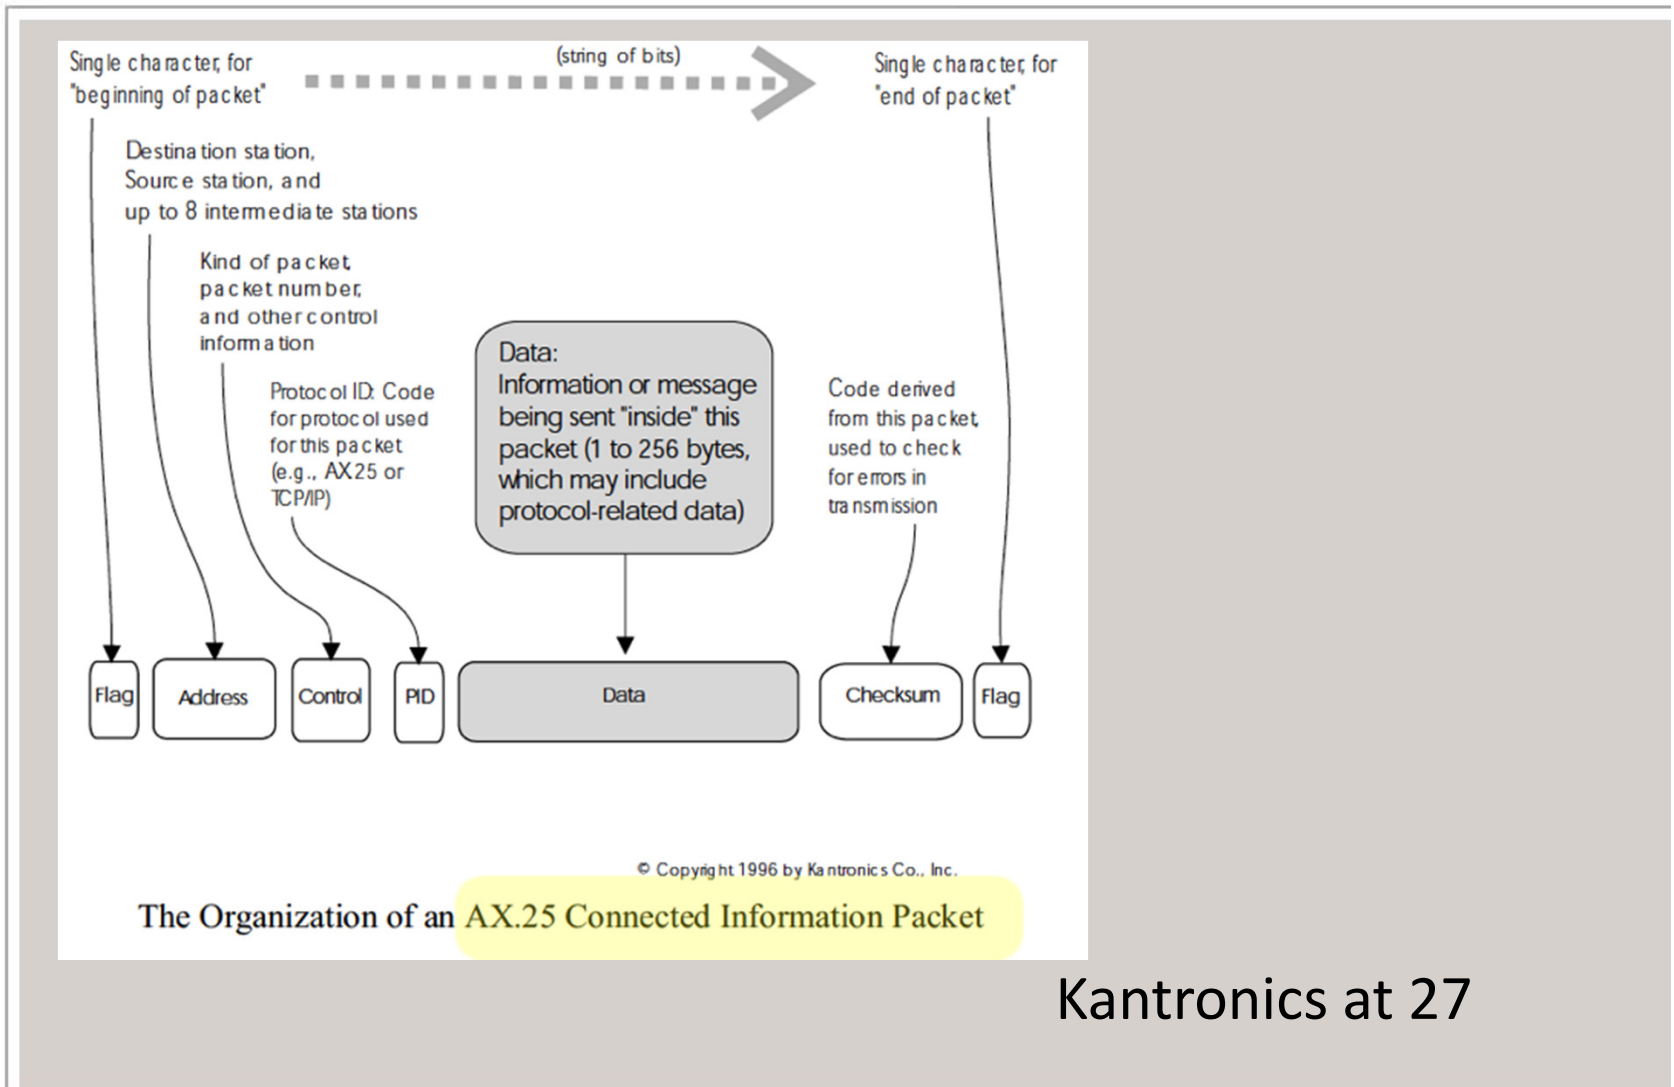

“...the site controller configured to receive the original data messages and the repeated data messages...” (2 of 5)

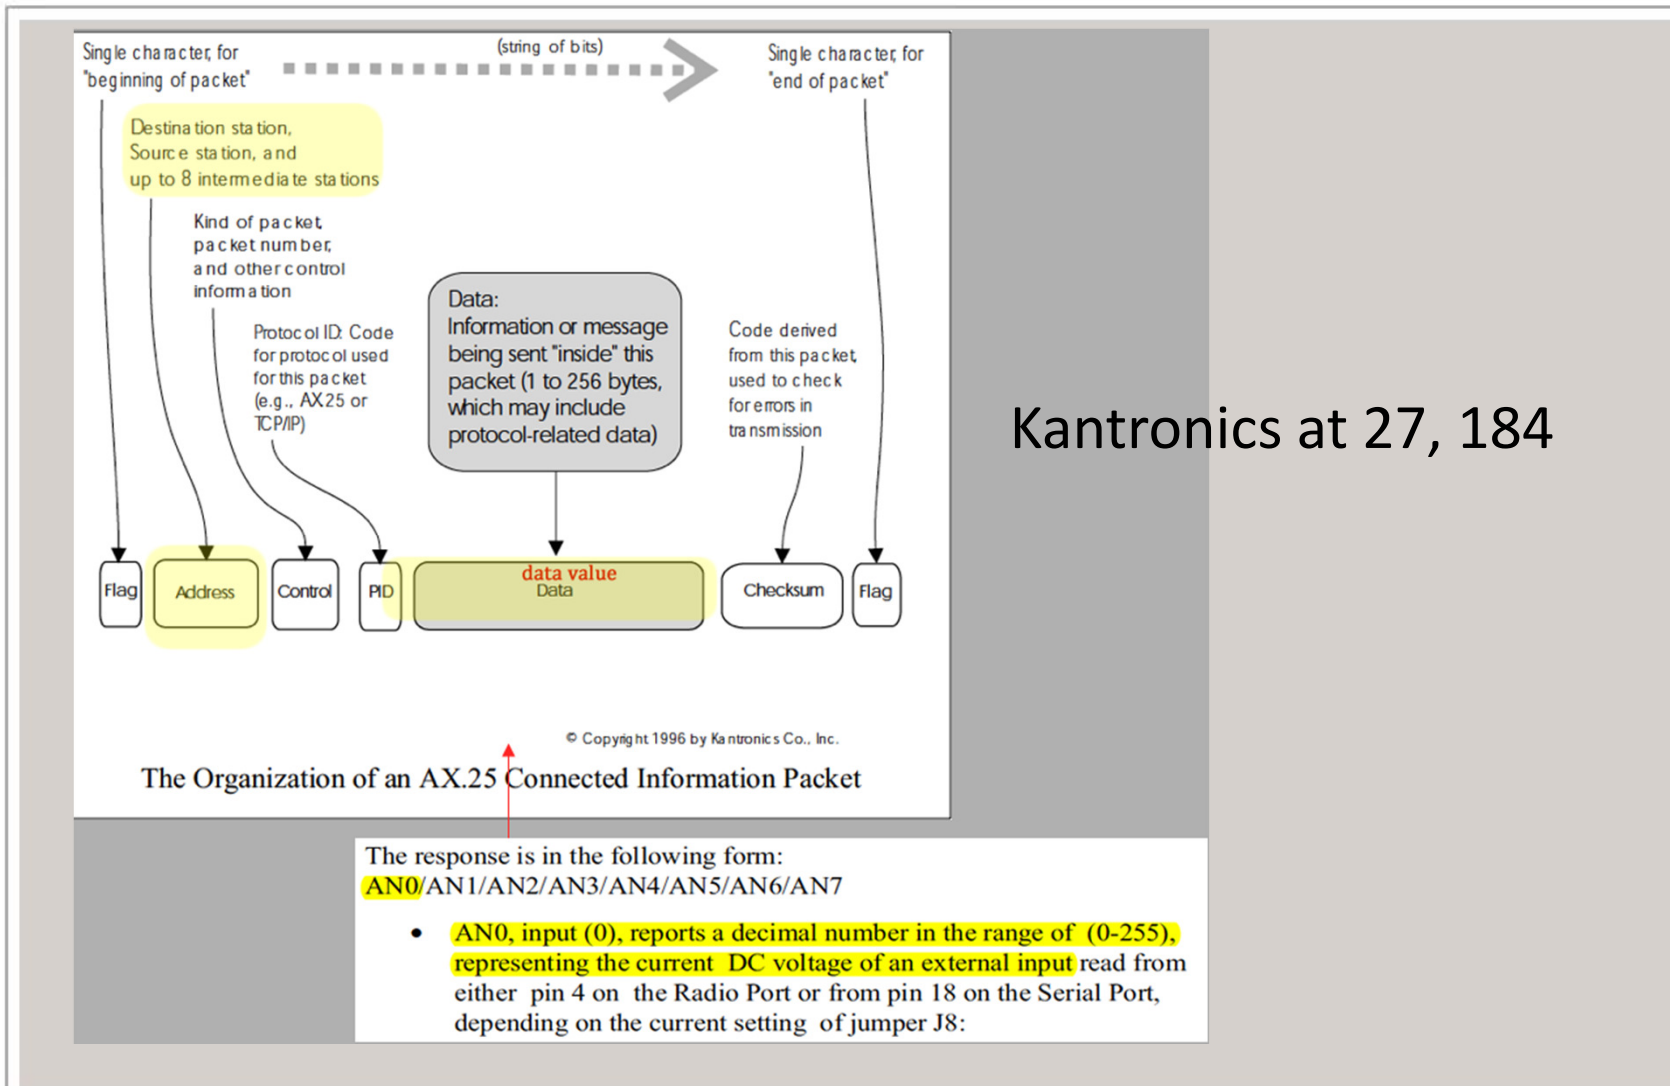

“...and transmit an original data message using a predefined wireless communication protocol,...” (3 of 5)

Kantronics at 27

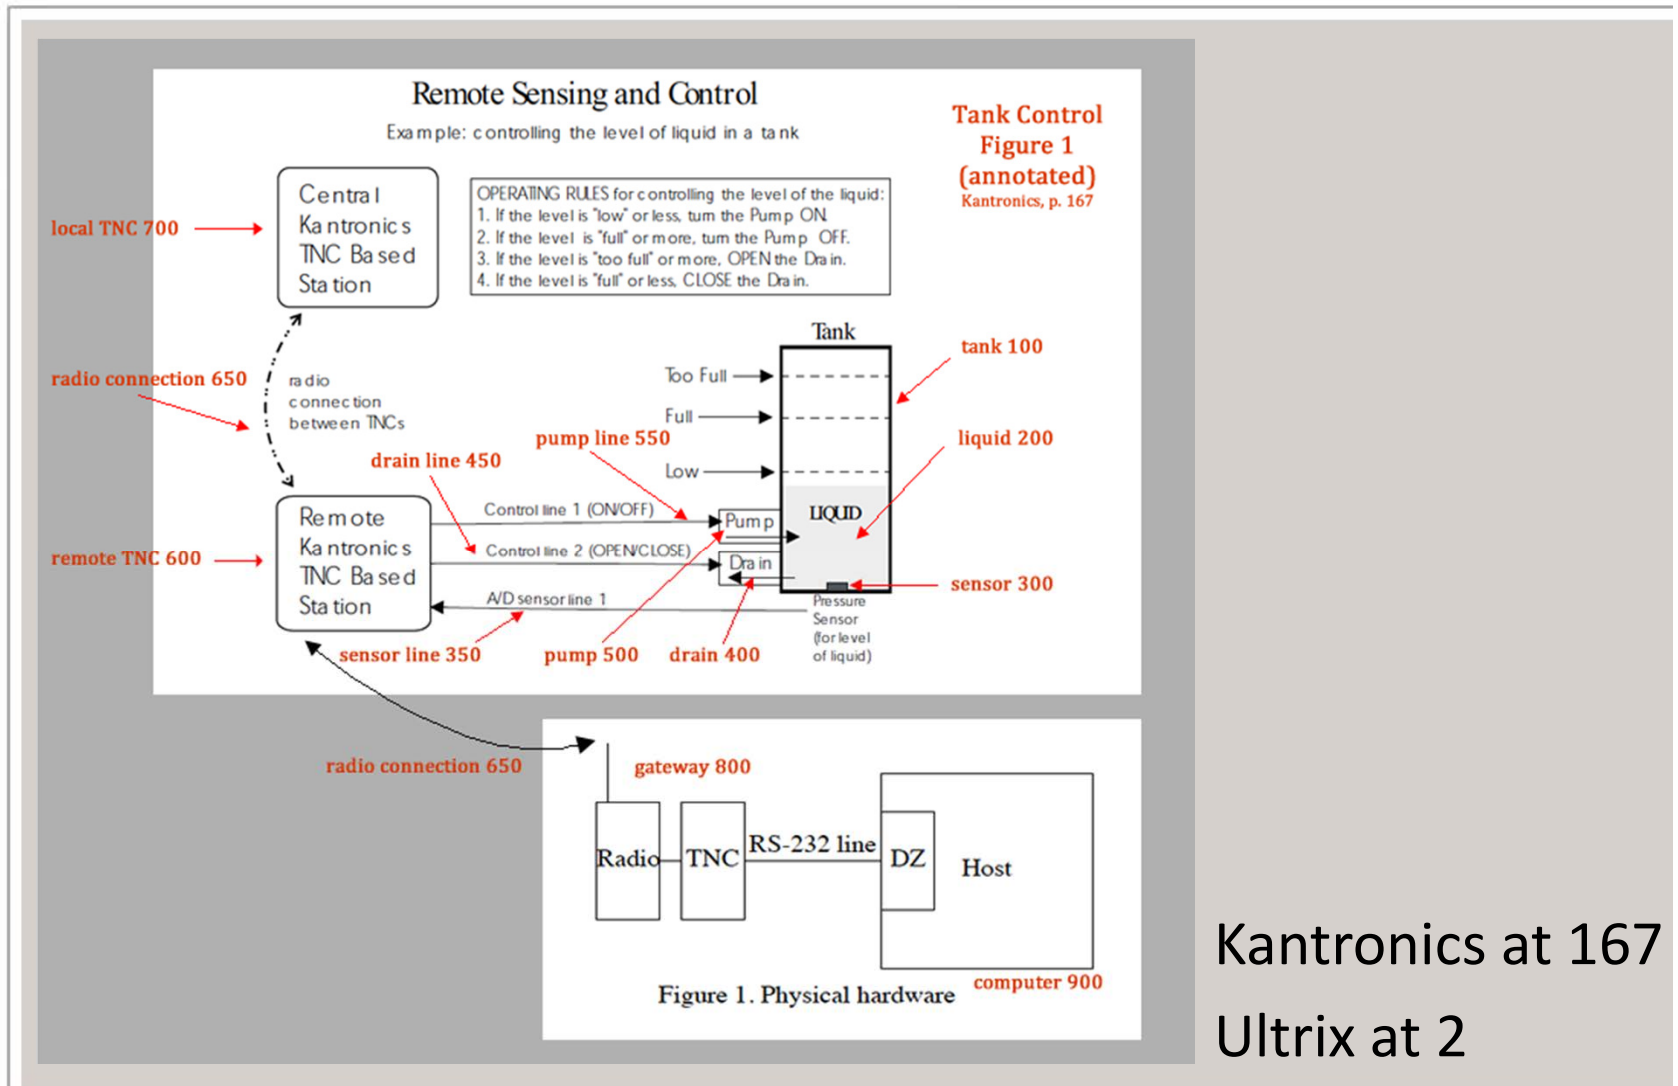

“...identifying the remote device associated with the corresponding sensor data signal,...” (4 of 5)

Kantronics at 27, 184

“...and provide information related to the sensor data signal to the wide area network for delivery to the host computer.” (5 of 5)
